

PAINT RUBBER

PRODUCT DESCRIPTION:

Accessory intended for the cleaning of painted surfaces and smooth, adhesive film coated surfaces with glossy surface finish.

This rubber will allow you to clean up the surfaces of a vehicle with great efficiency, without scratching them.

This operation is generally carried out on painted surfaces prior to application of adhesive-coated film.

GOOD TO KNOW:

How to know if a surface is dirty?

If you touch the bodywork with the outside of your hand and you feel resistance to sliding or if you hear a sticking sound (squeaking), the surface is contaminated.

The surface should then be cleaned with the rubber and, depending on the level of abrasiveness required, a diluted cleaning liquid (e.g. Shampcar) for a light abrasion, a glass cleaner for a medium abrasion, or water for a strong abrasion.

USER'S INSTRUCTIONS

- Knead and flatten the rubber.
- Spray a cleaning liquid and rub with the rubber by sliding it onto the car body with the palm of the hand while exerting only slight pressure.
- Wipe with a clean microfibre once the surface is smooth.

NOTES:

Prior to any use of the product, it is the responsibility of the user to verify the compatibility of the product with the surface to be treated. None of the published information constitutes a binding guarantee. The seller cannot be held liable for indirectly related damages and assumes no liability for claims that are higher than the replacement value of the purchased product. All specifications are subject to potential changes without prior notice. Our specifications are automatically updated on our website www.hexis-graphics.com.
