

KITPRESSE

PRODUCT DESCRIPTION:

Manual eyelet press

Kit contains:

- 1 manual press
- 1 crimping set, 10 mm
- 1 lot of 1000 eyelets, 10 mm
- 1 elastic cord
- 1 carrying case

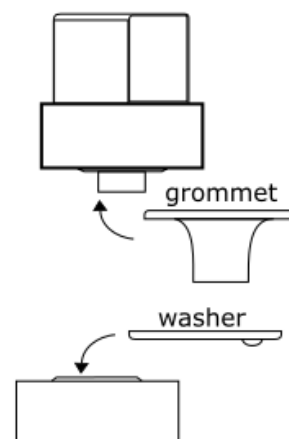

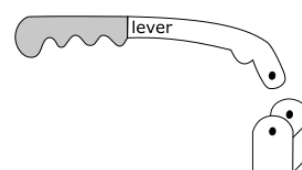

PRECAUTION FOR USE:

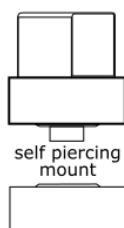

- Place the press on a solid surface (avoid soft surfaces like carpet etc.).
- Please lubricate the axle and the screw that holds the lever with a small amount of Vaseline or machine oil once a month.

USER'S INSTRUCTIONS

- Please fix the lever with the packed screw and nut to the body before using the press and adjust the limit screw for right distance.
- Place the large grommet in the top die of the press. There is a round retainer in the middle of the die to hold the grommet in place.
- Place the washer in the bottom part of the die set. The washer must be centred correctly and the curve should be facing downward.
- Position the fabric, vinyl or substrate between the tool set.
- Press the lever firmly until you feel the cutting. Continue pressing until it comes to a stop.
- Lift the back the lever and take out the fabric.
- There may be a piece of substrate left in the middle, you can pop it out.
- You now have a perfect hole with an eyelet.
- No need to use different tools to punch holes with the use of self-piercing grommet

TIPS:

- You can also use the press and the die set with standard non-self piercing grommets.
- You need to switch the top and bottom mounts:
Place the grommet die to the bottom and the washer die to the top.

STORAGE:

- Please store the press in a dry and non-acidic environment.
